

## Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

### Listing of Claims

1. (Currently Amended) A method for providing a radio frequency identification (RFID) comprising:  
facilitating a user in providing an instruction to a component of a mobile communication device to output a first data, ~~said output in a form of a first radio frequency signal to~~ emulating an emulate output of the first data by an active RFID transponder, the ~~mobile communication device~~component being also equipped to facilitate a user in communicating with a user of another communication device, with the communication being facilitated at least in part over a wireless network; and  
in response ~~to said providing an instruction~~, outputting the first data in the form of a radio frequency signal, said outputting emulating output of the first data by an active RFID transponder ~~as instructed by the user~~.
2. (Currently Amended) The method of claim 1, wherein said ~~first data comprises a selected one of a security key and an identifier~~component is a transceiver.
3. (Currently Amended) The method of claim 2, wherein said first data comprises a selected one of a security key ~~[[.]]~~ and said ~~security key comprises a door key~~an identifier.
4. (Currently Amended) The method of claim 3, wherein said ~~door security key~~ comprises a selected one of a garage door key, an exterior door key, an interior door key, and a motor vehicle door key.
5. (Original) The method of claim 2, wherein said first data comprises an identifier, and said identifier comprises a selected one of a social security number, a driver's license number, an affinity program account number, and a credit card number.

6. (Original) The method of claim 1, wherein the method further comprises facilitating the user in selecting the first data from a plurality of data using the mobile communication device.
7. (Original) The method of claim 1, wherein the method further comprises facilitating provision of the first data to the mobile communication device.
8. (Currently Amended) The method of claim 7, wherein said facilitating of the provisioning of the data to the mobile communication device[[]] ~~including~~includes facilitating provision of at least a signaling attribute associated with the outputting of the data in the form of a radio frequency signal.
9. (Currently Amended) The method of claim 1, wherein the method further comprises:  
~~detecting~~monitoring for proximal presence of a RFID reader by the mobile communication device; and  
on detection of a RFID reader by the mobile communication device, outputting a second data in a form of a second radio frequency signal, using the mobile communication device, emulating output of the second data by a passive RFID transponder.
10. (Currently Amended) The method of claim 9, wherein said ~~detecting~~monitoring comprises sensing for a probing radio frequency signal of the RFID reader by the mobile communication device.
11. (Original) The method of claim 9, wherein said first and second data are the same data.
12. (Original) The method of claim 1, wherein the mobile communication device is a selected one of a wireless mobile phone and a personal digital assistant equipped with communication capability.
13. (Currently Amended) A method for providing a radio frequency identifier (RFID), comprising:

~~detecting-monitoring~~ for proximal presence of a RFID reader by a mobile communication device, the mobile communication device being also equipped to facilitate a user in communicating with a user of another communication device, with the communication being facilitated at least in part over a wireless network; and

on detection of a RFID reader, outputting a data in a form of a radio frequency signal, using the mobile communication device, said outputting emulating outputting of the data by a passive RFID transponder.

14. (Currently Amended) The method of claim 13, wherein said ~~detecting-monitoring~~ comprises sensing for a probing radio frequency signal of the RFID reader by the mobile communication device.

15. (Original) The method of claim 13, wherein said data comprises a security key.

16. (Original) The method of claim 15, wherein said security key comprises a door key.

17. (Original) The method of claim 16, wherein said door key comprises a selected one of a garage door key, an exterior door key, an interior door key, and a motor vehicle door key.

18. (Original) The method of claim 13, wherein the method further comprises facilitating provision of the data to the mobile communication device.

19. (Original) The method of claim 18, wherein said facilitating of the provisioning of the data to the mobile communication device, including facilitating provision of at least a signaling attribute associated with the outputting of the data in the form of a radio frequency signal.

20. (Original) The method of claim 13, wherein the mobile communication device is a selected of a wireless mobile phone and a personal digital assistant equipped with communication capability.

21. (Currently Amended) A mobile communication device comprising:  
a transmitter to transmit a radio frequency signal;  
a storage medium to store a first data and instructions to operate the transmitter,  
the transmitter being operated to selectively (a) output [[the]] a first data in a form of as a  
radio frequency signal, in response to a user instruction, said output emulating output of  
the first data by an active radio frequency identifier (RFID) transponder, and (b) facilitate a  
user to communicate with another user of another communication device, with the  
communication being facilitated at least in part over a wireless network; and  
a processor coupled to the transmitter and the storage to execute the instructions.
22. (Original) The device of claim 21, wherein said first data comprises a selected one  
of a security key and an identifier.
23. (Original) The device of claim 22, wherein said first data comprises a security key,  
and said security key comprises a door key.
24. (Original) The device of claim 23, wherein said door key comprises a selected one  
of a garage door key, an exterior door key, an interior door key, and a motor vehicle door  
key.
25. (Original) The device of claim 22, wherein said first data comprises an identifier,  
and said identifier comprises a selected one of a social security number, a driver's license  
number, an affinity program account number, and a credit card number.
26. (Original) The device of claim 21, wherein the instructions are further designed to  
facilitate the user in selecting the first data from a plurality of data, and instructing said  
output.
27. (Original) The device of claim 21, wherein the instructions are further designed to  
facilitate provision of the first data to the mobile communication device.

28. (Original) The device of claim 27, wherein the instructions are further designed to include with said facilitating, provisioning of at least a signaling attribute associated with the outputting of the first data in the form of a radio frequency signal.

29. (Currently Amended) The device of claim 21, wherein the instructions are further designed to

detect ~~monitor~~ for proximal presence of a RFID reader; and

on detection of a RFID reader, output[[ting]] a second data in a form of a second radio frequency signal, emulating output of the second data by a passive RFID transponder.

30. (Original) The device of claim 29, wherein the instructions are further designed to sense for a probing radio frequency signal of the RFID reader.

31. (Original) The device of claim 29, wherein said first and second data are the same data.

32. (Currently Amended) The device of claim 21, wherein the mobile communication device is a selected one of a wireless mobile phone and a personal digital assistant equipped with communication capability.

33. (Currently Amended) A mobile communication device comprising:

a transmitter to transmit a radio frequency signal;

a storage medium to store a first data and instructions to operate the transmitter to

selectively (a) detect ~~monitor~~ for proximal presence of a radio frequency identifier (RFID) reader, and on detection of a RFID reader, output a data in [[a]] the form of a radio frequency signal, said output emulating output of the data by a passive RFID transponder, and (b) facilitate a user to communicate with another user of another communication device, with the communication being facilitated at least in part over a wireless network; and

a processor coupled to the transmitter and the storage to execute the instructions.

34. (Original) The device of claim 33, wherein said instructions are further designed to sense for a probing radio frequency signal of the RFID reader.
35. (Original) The device of claim 33, wherein said data comprises a security key.
36. (Original) The device of claim 35, wherein said security key comprises a door key.
37. (Original) The device of claim 36, wherein said door key comprises a selected one of a garage door key, an exterior door key, an interior door key, and a motor vehicle door key.
38. (Original) The device of claim 33, wherein the instructions are further designed to facilitate provision of the data to the mobile communication device.
39. (Original) The device of claim 38, wherein the instructions are further designed to include with said facilitating, provisioning of at least a signaling attribute associated with the outputting of the data in the form of a radio frequency signal.
40. (Original) The device of claim 33, wherein the mobile communication device is a selected of a wireless mobile phone and a personal digital assistant equipped with communication capability.
